docker

why docker ?

- consistency : works on every machine
- isolation: application run in isolated env
- efficiency : lightweight os
- scalability : ease to scale

reasons:

- one or more files missing in the prod
- software version mismatch
- different configuration setting

Docker Archithcture:

docker object  
containers networks  
volumes images

Running containers

- OS + python env
- folder
- code files
- install 3rd party lib
- keep port open
- how to run the application

Dockerfile
